11/12/2017

The laboratory for novel food and bioprocessing in the faculty of Biotechnology and Food Engineering, is seeking for an eager, creative and highly motivated PhD student / postdoc to explore the effects of high pressure on the kinetics and mechanisms of polyphenol non-enzymatic transformations.

This exciting long-term project deals with novel processing technologies and its effect on food natural active materials.

Appropriate candidates are required to have a strong background in chemistry, optimally kinetics. Experience with LC-MS – a significant advantage.
